

*Helping you get back
to doing what you love.*

AT CORYELL HEALTH REHABLIVING

YOUR GOAL IS OUR GOAL.

At Coryell Health RehabLiving, our team works with you, your loved ones, and your healthcare provider to create a comprehensive and individualized treatment plan. ***Our newly built, all-inclusive rehabilitation wing has 16 private rooms with direct access to occupational, physical, and speech therapy.***

The RehabLiving Therapy Wing is under the same roof as the Hospital and Medical Clinic, providing peace of mind for families of patients who come to us after a hospital stay from illness, surgery, heart attack, stroke, and other traumatic injuries.

REHABLIVING *(SHORT-TERM REHABILITATION)*

With a one-on-one rehabilitation and a physician-led approach, we are dedicated to helping patients achieve the most successful recovery in the shortest time possible.

Our therapy team is committed to getting you back to your normal routine quickly.

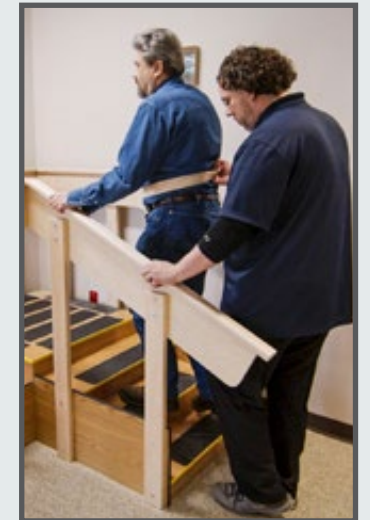

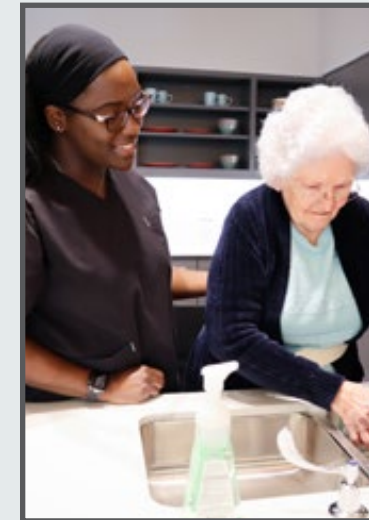

Our short-term therapy team uses a new, state-of-the-art gym to accomplish rigorous rehabilitation in:

- **physical**
- **speech**
- **occupational**

Unlike other facilities, all of our rooms are private or semi-private, featuring unmatched privacy with their offset design, closet, large window and cable TV for each resident.

WHEN IT FEELS LIKE HOME,
you can focus on getting back on track
with your everyday routine.

Comprehensive inpatient rehab helps patients regain strength and movement, developing skills to live as independently as possible. Patients in our rehabilitation programs participate in therapy sessions that are designed to mimic their life at home. Daily activities, like putting away dishes in a real kitchen setting, better prepare loved ones for life at home.

SHORT-TERM REHAB **SUCCESS FACTORS**

A MULTIDISCIPLINARY REHAB TEAM

A physician-led, multidisciplinary rehab team typically includes, but is not limited to: physical, occupational and speech therapists; pain management specialists; rehabilitation nursing staff; and a social worker.

A MULTIDISCIPLINARY APPROACH

RehabLiving takes a multidisciplinary approach to your recovery, offering therapy seven (7) days a week. Goals will be re-evaluated to ensure progress is made.

PATIENT-CENTERED TREATMENT

In order to meet individual goals, we often include the involvement of friends and family members in our patients' treatment plan for additional support.

STATE-OF-THE-ART REHABILITATION

State-of-the-art rehabilitation equipment is another crucial part of a patient's recovery, along with qualified staff members that can aid and supervise patients as they work toward their goals.

WITH YOU AT EVERY STEP OF YOUR JOURNEY

Our staff members escort patients to and from appointments with medical providers and for diagnostic testing. They remain with patients to help communicate their needs and any issues they may be having.
